

MP Rotator Accessories

As water conservation becomes more and more of a concern, the MP Rotator product line will be looked to more and more for its ability to save water. Measuring system pressure at the sprinkler location is a great way to help get the point across of just how great the MP Rotator is at saving water. If for instance you know the system pressure is too low because of flow problems, the MP Rotator can be used in place of the spray nozzles and the pressure will increase, uniformity will be improved and water will be saved...

The MP Rotator Gauge has been added to the list of MP Rotator Accessories to help our customers be the water conserving experts. The gauge assembly consists of an adapter (p/n MPADAPTER) and our Hunter pressure gauge. It is a great tool for finding the operating pressure at a spray or MP Rotator sprinkler. Customers can use the MP Rotator Gauge to assess the pressure of an existing system during a system audit. You can use it to better understand system conditions during a sprinkler related field issue call.

Keep in mind the other tools in the MP Rotator Accessory family that are available to work with the MP Rotator:

MPADAPTER – Pressure gauge adapter for spray head or MPR40

MPSTICK – Tool kit that allows a customer to build an adjustment tool that allows them to adjust their MP Rotators without having to bend down to head level to make the adjustment.

MPTOOL – Adjustment tool for the MP Rotator that allows radius and arc adjustment in one convenient tool.

This MP Rotator Gauge tool has the following stats:

Part #: MPGAUGE

List Price: \$50.00

The MP Rotator Gauge is offered individually packaged.
