

Valve box

STANDARD

Product data sheet

Valve box STANDARD

The box has been designed to enable users to create openings for installations within moments, all on their own.

It allows the installation of multiple devices simultaneously, while dedicated accessories help tailor solutions to individual needs. Its thoughtfully engineered construction guarantees resistance to damage, dirt, and harsh weather conditions. The option to mount dedicated accessories, such as rails or cover panels, ensures the box adapts to unique requirements. Its original appearance and practical design make it suitable for home gardens as well as residential complexes.

Features

➤ Ease of Installation

Specially designed cutouts at the bottom of the box allow for quick and easy hole creation using commonly available household tools. This feature enables efficient installation of multiple systems simultaneously.

➤ High Durability

The box boasts exceptional resistance to damage, dirt, year-round weather conditions, and acts of vandalism, thanks to its reinforced construction. An additional stabilizing ring ensures stability once installed in the ground.

➤ Simple and Controlled Access

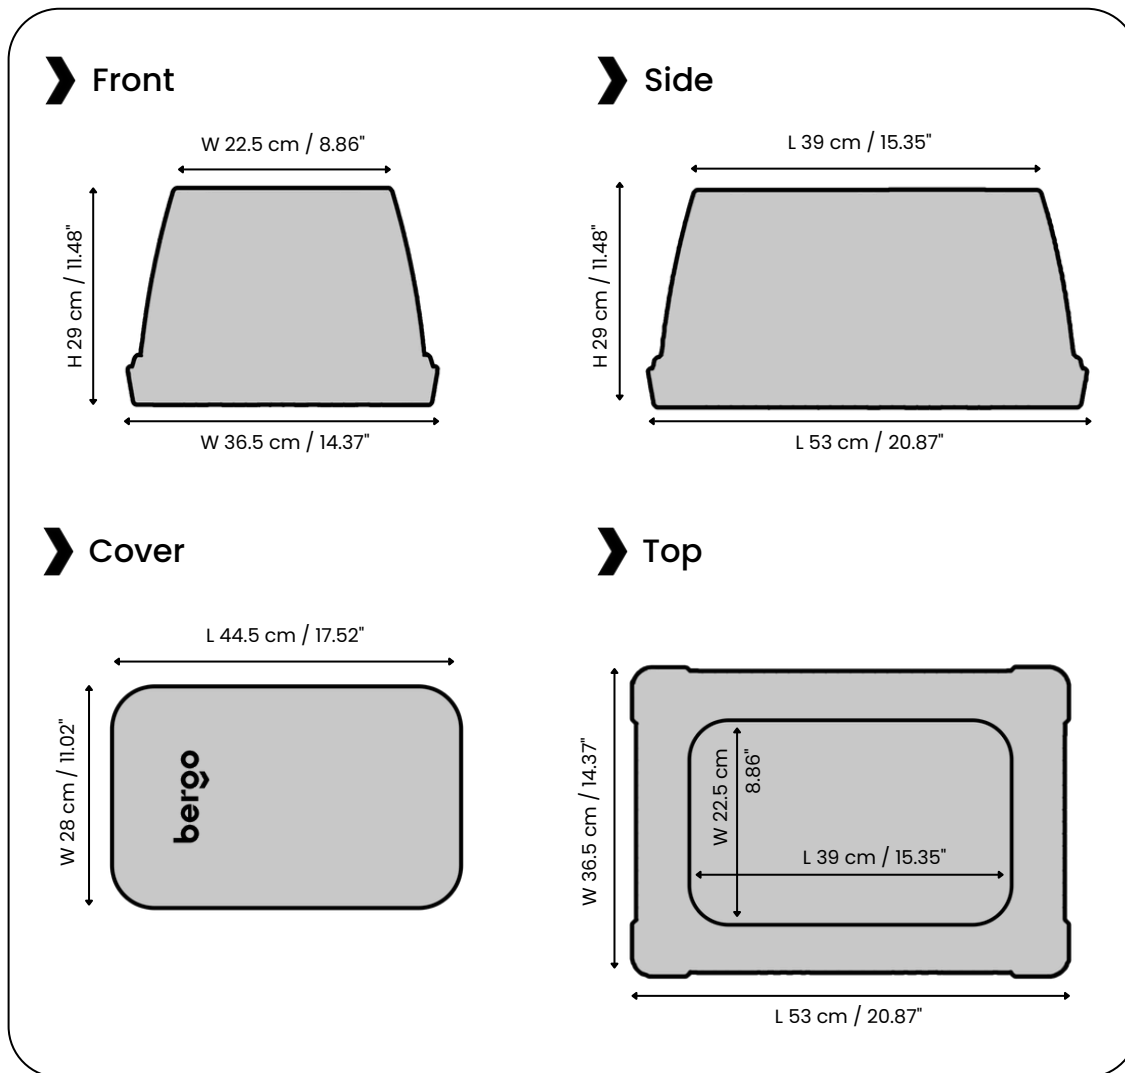

Installation, maintenance, or replacement are incredibly straightforward and quick. The spacious interior allows for convenient operation inside. The easy-open and snap-shut lid mechanism eliminates the need for additional tools when access is required. At the same time, unauthorized access is prevented with the use of a security screw.

➤ Expansion Capabilities

The interior provides ample space for dedicated accessories. Up to four Cable Mounting Rails can be easily installed, along with Cover Panels that facilitate the organization and installation of controllers.

Specification

Type	Valve box
