TANKS EXTRA FLAT

WWW.SIMOP.FR

SIMOP flat tanks meet all rainwater requirements:

- Storage, underground or above ground
- Rainwater regulation
- Recovery and reuse of rainwater
- 3 in 1 : Regulation, recovery and reuse

To facilitate installation, SIMOP 3 and 5^{m³} flat tanks are pre-equipped at the factory and delivered ready to install.

the **+**

- Extra-flat: total height 1 m
- Twinned together
- Robust
- Lightweight
- Ready to install

➤ EQUIPMENT

The **SIMOP flat tank adapts to your needs** and can be equipped according to your requirements:

Réguleo®

The **Réguléo control system** manages rainwater as close as possible to the source. It **protects against flooding** and **regulates the flow** of heavy rainfall.

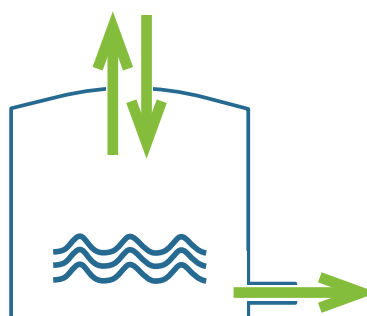

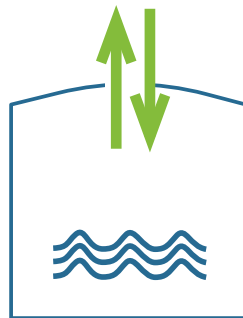

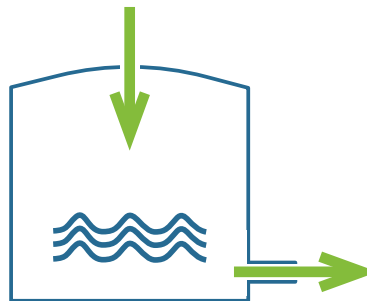

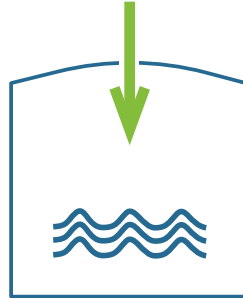

AQUAMOP

The **AQUAMOP** solution provides immediate access to stored water. It includes a **filtration system, a home manager or a pump.**

Thanks to this equipments, it is possible to reuse rainwater for **garden watering** washing exteriors and supplying the WC and washing machine (**if chosen by the manager**).

3 and 5 m³

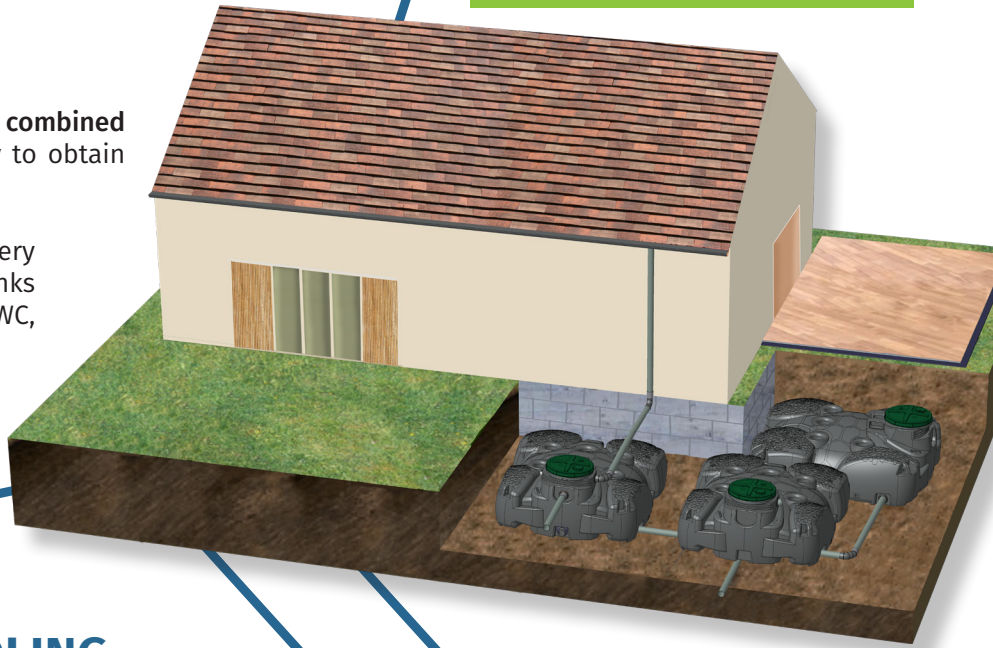

➤ **ONE TANK, 4 FUNCTIONS**

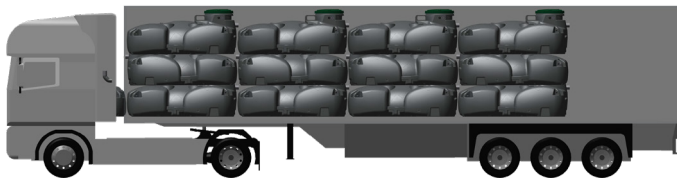

➤ TWINNING

SIMOP's extra-flat tanks can be combined with each other. This makes it easy to obtain volumes of 6, 8, 10 m³ or more.

Example: combining a 5m³ recovery and reuse tank^{with} two storage tanks provides 15m³ of water for the WC, washing machine, garden watering...

➤ STORAGE AND HANDLING

SIMOP extra-flat tanks can be stacked to **optimize transport and storage**.

Nb: For difficult access, the 3m³ flat tank can be lifted by up to 4 people, thanks to handling handles. A 3.5 T mini-excavator will suffice to lift the 5m³ tank.
